Model Of Interest: SD214-SF2P2SNM(D00)

For A Round Tower Leg,
the three clamps that can
be used are the Clamp147, Clamp005, or the Clamp015.

Clamp147

Specification: 2.88 - 4.5" O.D.
To 2.88 - 4.5" O.D Pipe

Clamp005

Specifications: 1.5 - 3.5" OD
To 1.5 - 3.5" OD Pipe

Clamp015

Specifications: 1.5 - 3.5" OD
To 1.5 - 3.5" OD Pipe

Clamp147 vs. Clamp005 vs. Clamp015

- The first Pipe specification is for the antenna.
- The base pipe diameter for the SD214-HF2P2SNM(D0S) is 2.88 inches.
- The Clamp147 spec for the first pipe is 2.88 - 4.5" O.D. Pipe
- The Clamp005 and Clamp015 spec for the first pipe is 1.5 - 3.5" OD Pipe.
- Both clamps will accommodate the 2.88 inch pipe diameter. Either the Clamp005 or Clamp015 may be better since the diameter of the antenna is somewhere in the middle of the spec versus the Clamp147 where the diameter is the starting point.
- The next thing to look at is the diameter of the tower leg where you want to secure the antenna.

Clamp147 vs. Clamp005 vs. Clamp015

- The Clamp147 spec for the second pipe is 2.88 - 4.5" O.D. Pipe
- The Clamp005 and Clamp015 spec for the second pipe is 1.5 - 3.5" OD Pipe.
- If the tower leg or support pipe has an outer diameter that is greater than 3.5 inches, then the only clamp that will work is the Clamp147.
- If the tower leg or support pipe has an outer diameter is greater than 1.5 inches, but less than 2.88 inches, then either the Clamp005 or Clamp015.
- If the tower leg or support pipe has an outer diameter between 2.88 inches and 3.5 inches, either clamp will work.

Sinclair Side Mount Kits

Sinclair Side Mount Kits

Sinclair's side-mounting kits offer sturdy support for antennas that can be side mounted in situations where top mounting is not the best option.

Selecting the right Side Mount Kit

When side mounting the SD222-SF, SD224-SF, SD210-SF, SD212-SF, or SD214-SF series, we recommend that the customer supports the antenna at both the top and bottom of the mast. The Sinclair SMK kits should be recommended to the customer when they order any antenna.

For the above mentioned series, there are two kits that can be recommended:

SMK-125-A3 or SMK-125-A7

SMK-125-A3 vs. SMK-125-A7

- Difference between the two is how far the antenna will be away from the tower.
- For the A3, it will be 3 feet away.
- For the A7, it will be 7 feet away.
- Both include a top and bottom support arm for the antenna
- Only for Exposed Dipole type of antenna
